

# Smartfill Advanced Accessory Kits

**emt**  
Experts in ultrafast SF6  
gas analysis and handling

The EMT Smartfill advanced accessory kit is designed to ensure engineers always have the equipment they need to perform a fill, top-up or continuous top up of an SF6 compartment.

The EMT Smartfill kits are designed to house all the standard supplied MFU/CTU accessories in one place and protect them from damage whilst in transit. Space is included in the kit for the following items which are standard or optional for the Smartfill range:

- Space to accommodate the Smartfill status indicator (traffic light)
- Space to accommodate the Smartfill temperature compensation probe
- Space to accommodate the Smartfill Smartweigh cylinder weighing scales

Following customer feedback, EMT have also added the following items to the kits:

- **15m/30m Power Extension Cable (MFU & CTU Kit)** A marine grade toughened power cable has been added to the kit as some sites struggle to have mains power close to the SF6 compartment. The cable, produced in bright orange to avoid trips or snags, is supplied in two halves allowing it to be run as a 15m or a 30m cable.
- **Heavy Duty All Weather Pouch** Whilst the EMT Smartfill CTU is designed to be waterproof and rugged to protect from environmental conditions, many clients have requested a cover pouch. This pouch provides additional protection for the Smartfill CTU from exceptional weather conditions such as snow or extreme heat; it is also good for locations close to the coast where salty air could cause degradation. Produced in electric blue and from hard wearing material, the EMT Smartfill CTU pouch offers extra protection and visibility of the unit on site, whilst unaffected performance or access to the instrument.
